**NOTES FOR TYPICAL RESIDENTIAL INSTALLATION**

This page shows typical installations for pavers.

- Drawings are for preliminary reference only (not for final construction).
- **Final designs for construction must be prepared by a registered professional engineer using the actual conditions of the proposed site and loads.**
- Block size and placement shown are for reference only, individual blocks vary with installation pattern.
- Section shown is the minimum recommendation for pedestrian loading. Projects with heavier traffic or sites with poor soil conditions may require thicker gravel base, concrete curb edge restraint, and/or sand subbase.
- Provide adequate surface drainage to prevent ponded water.

TYPICAL RESIDENTIAL PEDESTRIAN INSTALLATION

- Natural stone pavers, thickness varies
- 1" screed clean angular stone, 1/8" to 1/4"
- 6" of 3/4" clean stone, compacted in 3-4" lifts
- Woven geotextile fabric (recommended)
- Compacted subgrade soil
- Low profile paver edge restraint
- Steel spike
- Optional joint sand (ASTM C144)
