### INSTRUCTIONS: FOR BOTH ROUND & SQUARE FIRE PIT KITS

1. Familiarize yourself with the construction details shown on this page.
2. Mark out the location for your fire pit. Note dimensions shown are nominal so mark an area slightly larger than shown.
3. Excavate for drain stone base (approx. 6")
4. Fill excavated area with aggregate, level, and compact.
5. Place and center steel ring on prepared base.
6. Place blocks per the pattern. (For Round Kit, see clearances in cross section from liner to blocks)
7. **WARNING! Do not place the fire pit directly atop a patio surface. Instead, the fire pit should be "cut in" to the patio surface to avoid damage to the patio caused by conductive heat transfer.**

#### THE FOLLOWING STEPS ARE FOR A ROUND FIRE PIT ONLY

8. After placing blocks around the ring, adjust the blocks in or out to make the circle close and fit tight. If the blocks do not close the circle, move all blocks slightly in. If the blocks seem too long, move the blocks slightly out.
9. Place caps in circle around fire pit. Adjust the caps in or out to make them fit tightly together.
10. **WARNING! Not suitable for large fires. Fire size should not allow flame to contact Caps on Round Fire Pit.**
